Cost ratios (annual) including VAT as at 30 September 2023

	Class B	Class C
Based on period from:	01/10/2020	01/10/2020
Total Expense	1.72%	1.03%
Transaction Costs	0.00%	0.00%
Total Investment Charge	1.72%	1.03%
1 Year Total Expense	1.73%	1.03%

Total Expense (TER): This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

Transaction Costs (TC): This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

Total Investment Charges (TIC): This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Fund review

Over the quarter, the fund returned -4.5% (Class A), -4.6% (Class B), -4.4% (Class C) and -4.3% (Class X) behind a benchmark return of -3.4%. The underperformance was the result of an underperformance from the equity component over the period under review.

Market overview

After a positive first six months of the year both global equity and fixed income markets declined during the third quarter. There were several factors that unnerved investors over the summer months with the main headwind being confirmation from central banks that interest rates are set to remain higher for longer, as they continue to fight inflation. Bond prices fell pushing yields to their highest level of this cycle leading equity prices to naturally adjust lower as a result of a higher discount rate.

The adjustment of interest rates and interest rate expectations has been significant with the recent credit downgrade of US sovereign debt also combining with a sharp pick up in US Treasury issuance adding impetus to the upward trend in yields. During the midst of the COVID-19 pandemic, the 10-year US Treasury yield hit an all-time intraday low of 0.3%. Since then, we have experienced an astonishing turnaround with 10 year yields now standing at 4.6%, and it's worth remembering that the annual rise of c. 2.3% over 2022 was already the biggest yearly increase since 1788.

Long duration growth assets such as technology shares, which had been the driver of returns earlier in the year, felt the brunt of the pain. Conversely, higher crude oil and energy prices resulted in the energy sector outperforming the rest of the market by 15%. While the US economy appears resilient, softening economic data elsewhere, particularly in Europe and China, has led to growing concerns about the near-term global growth outlook and negative revisions to corporate earnings.

From an asset allocation perspective, no changes were made during the quarter, and we remain underweight equity, neutral fixed income and overweight cash.

We are cautiously positioned with an underweight allocation to global equity at a time when cash and fixed income assets are providing more attractive forward-looking risk adjusted returns, while realising that interest rates are close to reaching their peaks in the current business cycle.

Looking ahead

The current economic cycle would appear to be quite mature in nature and unlikely to reaccelerate until monetary authorities decide to ease interest rates again, an event that has been pushed back until next year. The increase in energy prices is concerning and pose an additional headwind to the direction of both inflation and companies profit margins.

Equity valuations have adjusted somewhat to higher real yields and are no longer that extreme but remain far from cheap when compared to the income yields on offer in cash and fixed income (15 year high) when adjusted for risk.
